

We build extraordinarily durable chairs, using more steel than plastic and these components last a lifetime. Because of this quality, we can do something most other seating manufacturers can't do – we warranty all our chairs for 24-hour usage with no weight limit. And to ensure that a chair is not discarded for a minor problem, we expressly include labor. So with just a phone call, or email, the chair returns to life.

We source 85% of our components within a 30 mile radius of our manufacturing plant in Fullerton, California, USA.

Green Check Certified

By stringent design criteria, we have chosen parts that together produce a chair that is certified compliant for LEED-CI indoor environmental air quality. This means that there are less chemicals emitted by our chairs and its components. By choosing Sitmatic chairs for your workplace, you are also contributing to a cleaner, safer, more sustainable environment.

Our shipping cartons consist of 25% recycled material and we never use staples to simplify the recycling process. Protective molded pulp trays are 100% recycled and compostable.

Every chair that leaves our facility is covered by a green, moisture-proof, protective liner that is corn-based and 100% biodegradable.

We commit ourselves that all future designs will use as much recycled and recyclable content as possible and any manufacturing process we, or our subcontractors employ, will be as environmentally friendly as possible.
